

Street food Vounder

Ahmad Farooq :23-NTU-CS-1128

Kashmir Jamshaid:23-NTU-CS-1167

Abdur rehman Sudais :23-NTU-CS-1123

Problem Statement

- **Customers struggle to find nearby street food vendors efficiently**
- **Reliance on chance, word-of-mouth, or outdated info**
- **Small vendors lack digital visibility**
- **Existing platforms exclude informal vendors due to high costs**
- **Need for hyper-local, real-time discovery**

Related Projects / Literature Review

- **Review of existing food discovery systems**
- **Evolution: Word-of-mouth → Online directories → Location apps → Social media**
- **Compared projects: Foodpanda, Uber Eats, Google Maps, WhatsApp groups**
- **Key gaps: High commissions, no real-time for small vendors, disorganized data**

Methodology

- **Development approach and process**
- **Requirement gathering techniques**
- **Selected model and reasons**
- **Sprint planning overview**

Objectives

- Improve discovery for customers
- Provide visibility for vendors
- Real-time location-based search
- Secure and user-friendly system

Project Scope

- **Stakeholders:** Primary – Customers (browse, order, track) and Shopkeepers (manage menu, orders); Secondary – Administrators (approve shops, monitor platform).
- **Time Scope:** Supports shop-specific hours; real-time order updates via WebSocket; limited cancellation window (e.g., 5 minutes).

Project Scope

- **Content Scope:** Includes secure JWT auth, geo-spatial shop search (e.g., 5km radius), catalog CRUD, full order management with cart/checkout, and two-way reviews.
- **Assumptions:** Stable internet for all users; shopkeepers have devices for instant management; accurate GPS from devices.
- **Limitations:** Hyper-local only (no multi-city support); single currency; no external payment gateway integration; no dedicated delivery driver role.

Functional and Non- Functional Requirements

Functional Requirements

User: Register/Login, Search vendors, Submit ratings/reviews

Vendor: Manage stall/profile, menu, location, orders

Admin: Approve/reject vendors, View analytics, Ban users

Map & Location: Display markers, Radius search, Show distance

Order Management: Place orders, accept/reject, real-time status tracking

Non-Functional Requirements

Performance: Map loads <200ms, handle concurrent users

Security: bcrypt hashing, JWT authentication, Role-Based Access Control

Usability: Clean intuitive UI, mobile-responsive, minimal learning curve

Scalability: MongoDB for easy expansion, modular backend architecture

Reliability: High availability, fault-tolerant services

Use Case Description and Diagram

Use Case ID	Use Case Name	Actor	Description
UC-01	Register / Login	Customer, Vendor, Admin	User creates account or logs in with credentials for secure access.
UC-02	Search & View Vendors	Customer	Customer searches nearby vendors using location, filters, and views details on map.
UC-03	Manage Vendor Profile & Menu	Vendor	Vendor adds/edits stall details, menu items, prices, images, and operating hours.
UC-04	Place Order	Customer	Customer adds items to cart, checks out, and places order from a vendor.
UC-05	Manage Orders	Vendor	Vendor views, accepts/rejects, and updates order status in real time.
UC-06	Submit Rating & Review	Customer	Customer rates and reviews vendor or items after order completion.
UC-07	Approve / Reject Vendors	Admin	Admin reviews and approves new vendor registrations or rejects suspicious ones.
UC-08	View Dashboard & Analytics	Admin	Admin monitors platform activity, popular vendors, and system reports.

Class Diagram

Sequence Diagram

Use Technologies

- Frontend: Next.js / React, Tailwind CSS
- Backend: Node.js, Express.js
- Database: MongoDB
- Mapping: Leaflet.js + OpenStreetMap
- Authentication: JWT, bcrypt password hashing
- Others: Figma (wireframes), Agile tools

Literature Review in case of R&D Project

- Key findings: Existing platforms exclude small vendors; need for dedicated hyper-local solution
- Technologies reviewed: GPS, LBS, geospatial mapping, web frameworks
- Justification: FVLS fills the gap with cost-effective, real-time focus

Any Questions

Thanks
